## Vertical wall mounted access ladder

Vertical wall access loft ladder mobile structure made of galvanised 15/10 stamped sheet metal and with spring cushioning and recall to make opening and closing the ladder easy.

To help you ascend and descend, it has a telescopic handrail on the right-hand side and two handles are provided to enable an easy exit onto the upper floor.

The vertical wall access concertina loft ladder box is in galvanised 10/10 sheet steel whilst the hatch is made of a prime 16 mm chipboard panel having minimum formaldehyde emissions (class E1, UNI EN 13986:2005 standard).

The vertical loft ladder is certified according to European Norms (UNI EN 14975:2007) and grant a load capacity of 150 kg (tested with static test load of 260 kg).

The vertical wall access concertina loft ladder is manufactured in a variety of sizes to suit most applications and is delivered fully assembled, ready to be installed. Contact us now with your dimensions for an unbeatable price.
